Projects:

Project Name: [mybook:Live project link](#) [Client side github link](#) [Server side github link](#)

Features:

This is a **Social Media** full stack project-

First of all, users have to create an account and then they can log in to the application.

Users can create a post, react (like, love, angry) to another user's post, and also can comment.

Users also can comment on a post and react to a particular comment.

A user can delete his own comment or own post etc.

Technologies: NextJS, Tailwind, Axios, React Cookie, React hook form, Tostify, Nodejs, Expressjs, MongoDB, Mongoose, Bcrypt, Cors, Cookie parser, JWT etc.

Project Name: [thecarz:Live project link](#) [Client side github link](#) [Server side github link](#)

Features:

This is a full stack project where users can purchase a product and payment.

An admin can add new products, manage products, and manage orders.

To purchase a product, first of all, users have to log in/create an account through email and password and also use the Social network Google.

Technologies: Tailwind, daisyUI, Flowbite, Reactjs, React Router, React Query, React hook form, React hot toast, Firebase, Firebase hooks form, Nodejs, expressjs, MongoDB etc.

Project Name: [electroinventory:Live project link](#) [Client side github link](#) [Server side github link](#)

Features:

This is a warehouse website where users can store, delete and manage their products.

This site is not for every general user. To use this site for managing products a user has to create a new account or login with an existing account.

When a user logs in he/she will see more extra menu items. They can store, update, delete and get the product details.

Technologies: Tailwind, Flowbite, Reactjs, React Router, toastify Firebase, Firebase hook form, Nodejs, expressjs, Mongoddb etc

Languages:

Languages: Bengali- Native.
English- Comportable.
German - Basic.
