Personal Projects

- **Computer Parts Manufacturer** - Live Site || Github Client || Github Server
  Features:
  - Email-password and Google Authentication created by firebase.
  - Difference between admin and user route. Admin cannot access user route and user cannot access admin route. To order the product user has to log in first.
  - Users can give reviews and admins can added products and also delete products.
  - In the dashboard, my profile route users and admin both can give or update their personal information.

  Used Technologies: React, React Router, Node.js, Express.js, MongoDB, Tailwind, Firebase.

- **Car Warehouse Management** -   Live Site || Github Client || Github Server
  Features:
  - Login and Register System for Users.
  - Login users can add products and also see their own added products.
  - Product quantity decreases dynamically after delivering that product.

  Used Technologies: React, React Router, Express.js, MongoDB, Firebase, React Bootstrap.

- **Authentic Homemade Food** - Live Site || Github Client
  Features:
  - If anyone wants to order food he has to register or log in first.
  - During registration the user gets a verification email.
  - Users can order different types of packages from here.

  Used Technologies: React, React Router, Firebase, React Bootstrap.
